

1. ADAPTIVE TRUST DYNAMICS

Trust evolves over time through interaction, feedback, and experience.

- Calibration
- Feedback Loops
- Learning & Evolution
- Temporal Evolution
- Trust Transfer & Asymmetry

2. CONTEXT

- Task Characteristics
- Risk & Vulnerability
- Environment (e.g., human-in-the-loop, facilitating conditions)
- Governance & Institutional Trust Context
- Readiness & Identity Factors
- Uncertainty Management

Situational factors and environment shape how trust is formed and adjusted.

3. HUMAN TRAITS

- Disposition (e.g., trust propensity, technophobia)
- Experience (e.g., familiarity, expertise, knowledge)
- Personality (e.g., proactivity)

Individual differences influence initial trust and how it develops.

These dimensions interact continuously, shaping and recalibrating trust over time.

5. OBJECTIVE SYSTEM PROPERTIES

- Performance (accuracy, correctness, reliability)
- Technical Behavior (responsiveness, consistency, adaptability)
- Governance & Ethics (privacy, transparency, accountability, alignment)

The actual capabilities and safeguards of the AI system.

4. SUBJECTIVE PERCEPTION

- Perceived Performance (usefulness, ease of use, confidence)
- Interpretability (transparency, explainability, understandability)
- Social Perception (anthropomorphism, credibility, empathy, benevolence, bias, relatability)
- Cognitive & Affective Responses (e.g., safety beliefs, anxiety)

How users perceive and interpret the system influences trust.
